

## Electric Boom Lift Attachment

Electric Boom Lift Attachments - Type "E" forklifts meet the least standards for fire and electrical hazards. This is the most common label used for electric lift trucks. Forklifts described as type "E" cannot be used in dangerous areas. Type "ES" trucks meet all the standards of Type "E" lift trucks and have other equipment in order to avoid the emission of sparks and control the surface temperature of forklift components.

The more specialized forklifts are the type "ES" electric vehicle and these are not typically found in the marketplace. Type "EE" lift trucks meet all the standards of the ES and E model and have all electric motor and spark generating components fully enclosed. The type "EE" version is then used where dangerous surroundings have been identified. Type "EX" lift trucks are specially meant for use in surroundings where flammable fibers or dust or vapors can be existing. These types of lift trucks are constructed utilizing no spark producing parts together with several protective measures in order to ensure optimum safety in the risky applications they could be called upon for.
